

Australia Count Instructions

T-i^x Counting Guidelines for New \$5, \$10, \$50 AUD Bills

The Bank of Australia introduced the new \$5 banknote on 1 September 2016, the new \$10 banknote on 20 September 2017, and the new \$50 banknote on 18 October 2018. Before you can accurately count these new banknotes on your Tellermate T-i^x machine, you must calibrate your machine and enable both the \$5N, \$10N, \$50N option or update the T-i^x software to the latest revision. Instructions to manually setup are below.

Your Tellermate cash counting process will remain the same with the addition of the following steps:

- **The new \$5, \$10, \$50 bills MUST be counted separately from the older bills on the Tellermate equipment.**
- **Count old bills on \$5, \$10, \$50 denomination.**
- **Count new bills on \$5N, \$10N, \$50N denomination.**

Example: Count old bills on \$5 denomination, count new bills on \$5N, the same goes for 10, 10N, \$50, \$50N...

T-i^x Calibration Instructions for the New AUD
